NEW QUESTION 15

- (Exam Topic 5)

Refer to the exhibit.

Home Call Control Configuration Diagnostics Maintenance L3_Support

Troubleshooting

Deactivate standby Re-run diagnostics

Diagnostics that helps to identify issues that may cause the TelePresence system to underperform or fail to work as expected.

WARNING: Network Speed Auto Negotiation
Cisco recommends enabling Ethernet autonegotiation on both ends of an Ethernet link. Ensure that both the device and the switch have network speed autonegotiation enabled.

WARNING: Echo Cancellation Delay
High delay in audio loop detected. Highest delay: 170ms
This TelePresence system has been setup in a non-optimal manner and is not providing an optimal TelePresence experience. The delay in the output path is currently so high that the HDMI audio output arrives outside the time envelope where the acoustic echo canceller is operating. The system has automatically corrected this, at the cost of added delay on the output. If the output TV/monitor has a gaming mode or low latency mode it should be activated.

OK: System Name
The device has a system name set.

The customer recently connected a new TV monitor to the Cisco TelePresence endpoint. This device is now showing a warning concerning the echo cancellation delay. Which action could help mitigate this issue?

- A. Turn off any postprocessing settings.
- B. Turn off 3D mode on the new TV.
- C. Turn on Frequency Scan Acceleration for the new TV.
- D. Turn off surround sound on the new TV.

Answer: A

NEW QUESTION 16
